REPORT DEPTH

Executive Summary

1. Company Snapshot

- Legal name: PHMG (group entities: PH Media (USA) Inc.; Please Hold (UK) Ltd.; PHMG (AUSTRALIA) PTY LTD; PHMG (CANADA) Inc.; PHMG (NEW ZEALAND) Ltd.). Employee-owned since Apr 2025.
- Scale & finance: ~36k clients; FY2023 revenue £85.5m (double-digit growth 2021–23); profitable with healthy working capital at trading subsidiary level.
- Footprint: Manchester HQ + offices in Chicago, Phoenix, Brisbane; clients in 50+ countries.
- Core products: Exclusive music, audio branding, on-hold marketing, Complete Caller Experience (cloud telephony), PHMG Portal, caller analytics, creative & production services.
- Tech signals: cloud telephony/analytics platform, PHMG Portal, AI-referenced capabilities, patented processes.

- Customers: global enterprise brands and high-volume SME base (implied ARPU ~£2.3k/year).

2. Top 3 Opportunities (condensed)

- Predictive churn scoring + early-intervention playbooks (Priority #1)
  - What: model risk using Portal engagement, caller analytics, billing & support; surface scored accounts and auto-generate ranked playbooks for CSMs.
  - Impact: High; estimated retained revenue £0.8M–£2.5M/yr for 1–3pp churn reduction. Effort: Medium.
- Renewal & upsell orchestration with tailored offer generation (Priority #2)
  - What: auto-generate personalised renewal/upsell packages using churn score, usage and contract data; auto-populate proposals and timed outreach.
  - Impact: High; estimated incremental revenue £0.9M–£4.0M/yr. Effort: Medium (CRM/billing/legal integrations required).
- Automated "Action Pack" insights from caller analytics (Priority #3)
  - What: deterministic rules + LLM summarisation to deliver prioritized, one-click recommendations in-portal (audio refresh, IVR tweaks, A/B tests).
  - Impact: High; estimated uplift £0.4M–£2.0M/yr through greater adoption and retention. Effort: Medium.

3. Why Now

- Large, recurring base (36k clients) means small % improvements scale to material revenue; implied ARPU ~£2.3k amplifies impact.
- PHMG already owns key telemetry (PHMG Portal + Complete Caller Experience) — data prerequisites are largely available.
- Company is growing, profitable and employee-owned (EOT) — strategic orientation to invest in customer lifetime value and margin preservation.

- AI is already referenced on site and can accelerate automation (scoring, LLM summarisation, guided workflows) with moderate engineering lift.
- Quick wins protect ARR and free CSM capacity for higher-value selling while larger bets (A/B experimentation) remain follow-ons.

4. 90-Day Pilot Overview (Predictive churn scoring + playbooks)

- Objective: demonstrate that a telemetry-driven churn score + templated intervention increases early renewals and reduces near-term churn among a test cohort.
- Scope: 2 segmented cohorts (1) 500 SME recurring clients with mid ARPU; (2) 100 enterprise/high-ARR accounts. Use 6–12 weeks historical data + live 30-day window.
- Key activities by week:
    - Week 0–2: Project kick-off, data mapping (Portal logs, caller analytics, CRM, billing, support), privacy & legal checklist (GDPR). Identify success metrics and baseline.
    - Week 3–5: Build and validate churn risk model (explainability layer), design ranked playbooks and templated communications; instrumentation for logging and A/B assignment.
    - Week 6–8: Integrate prototype into PHMG Portal / CSM dashboard; run controlled rollout (auto emails + CSM escalations) to test cohort.
    - Week 9–12: Measure outcomes, collect qualitative CSM feedback, iterate playbook content; prepare scale recommendation.
- Team & resources: Data engineer, ML engineer / data scientist, Product owner, 2 CSMs, Legal/Privacy, 1 Portal engineer, Analytics PM. Minimal infra: existing Portal + analytics exports.
- Guardrails: human-in-the-loop for pricing/contract changes, explicit client consent for outreach, GDPR compliance, no auto-deploy of creative without client sign-off.
- Success criteria (90 days): model precision/recall acceptable (e.g., lift in observed churn risk > baseline); increase in early renewals in test

vs control by ≥10%; CSM time saved per at-risk account measurable; playbook adoption ≥20%.

5. KPIs to Track

- Commercial / retention: annual client churn rate (%), net retention rate (%), retained revenue (£), number of early renewals within 90 days, upsell conversion rate (%).
- Adoption & engagement: PHMG Portal activation % (30 days), Action Packs delivered per client/month, recommendation adoption rate (%).
- Operational: CSM time spent per at-risk account (hrs), time to close renewal (days), MTTR for support tickets (hours), ticket re-open rate (%).
- Financial / cash: incremental ARR from pilots/upsells (£), DSO (days) and invoice dispute rate (%).

Next steps (recommended): greenlight 90-day predictive churn pilot with data access approvals, nominate CSM & technical leads, and confirm legal/privacy guardrails to begin Week 0 data mapping.
